CVE-2026-115560 Patch Verification Report

Empirical Evidence, Sampled Targets (PHP 5.5 - 8.4) & Lab Audit Log
Date: 2026-10-24 | Target Scope: PHP 5.5 through PHP 8.4.xx

1. Patch Integrity & Build Verification

All range patches were verified with --fuzz=0 using build_115560_patches.py (12/12 passed). The PHP 8.1 FPM binary was compiled cleanly from source on php81-mitigation (/root/php-fpm8.1.cve115560_proper). Sequential application with CVE-109618-109619 applied without clobbering (--fuzz=0); runtime interaction remains unverified due to Patch 1's early guard.
